Ceiling Recess

# Perimeos®

## Ceiling Recess

Perimeos® is a revolutionary ceiling perimeter solution, for concealing blinds and curtain tracks. A key feature is the SpeedClip™ mounting channel. This allows the Perimeos recess profile to be installed along with the ceiling. Blinds or curtain tracks can then be easily installed later without any mess or drilling. The strong aluminium profile enables you to create a much slimmer and neater pocket than would be possible with conventional drylining methods.

### Made in the UK

Our UK manufacturing facility ensures total quality control, short lead times and low transport costs.

### Choose your Style

A wealth of style options including timber, fabric and powdercoat finishes to blend in with your ceiling design.

### Versatile and Flexible

A range of trims and transitions make Perimeos suitable for many different ceiling types and layouts.

### Recyclable

Perimeos® is made from an aluminium alloy which is fully recyclable, conserving resources for future generations..

### Automation Ready

Available with integrated wiring containment for motorised blinds and tracks, saving you time and costs on cabling.

### 5 Year Warranty

For peace of mind and reduced life cycle costs, Perimeos comes with the Decor Systems standard 5 year warranty.

**Universal Mounting Channel**

Channels on the top and sides of the box allow direct fixing to soffit, or suspension via brackets and threaded bar.

**SpeedClip™**

Innovative mounting system allows blinds or curtains to be fitted at a later date, without any drilling or mess. Ideal for CAT A fit out scenarios where blinds will not be installed until the building is occupied.

**Locking Cover Trim**

The cover trim profile is securely locked onto the pocket.

**Modular Transition Options**

Versatile modular design allows different transition trims for multiple ceiling types and configurations.

**Chain Guide**

A tough polymer insert guides the blind operating chain through the cover trim for smooth and quiet operation.

# Options

Indicates standard option

## TRANSITION TYPES

Choose a transition type to suit the ceiling style. Transition trims are reversible and can be added to either side of the box.

**Plain**

Suitable for suspended ceilings, a plain 25mm edge allows the tiles and tee sections to rest on it.

**Horizontal Drylining**

For plasterboard MF ceilings, the transition acts as a stop beading and is keyed ready for skim.

**Vertical Drylining**

For bulkhead style situations where the plasterboard meets the box vertically.

## MOUNTING OPTIONS

**Direct to Soffit**

Simply fix through the box directly to the underside of the soffit.

**Suspension Hanger**

For suspended or monolithic ceilings with a void above, it can be suspended on M8 studding.

**Face Fixed**

Uses the plain transition to fix the box to vertical surfaces such as curtain walling mullions.

## ACCESSORIES

### Curtain Track Profile

Add a recessed curtain track to the front or back of the box with this neat transition.

### Bridge Profile

The bridge profile is a spacer extrusion which can accept a decorative filler to create stunning effects in timber, metal, acrylic, fabric and more.

### Side Channels

To create a full blackout blind, add side channels which neatly integrate with the main Perimeos profile.

### Perimeter Lighting

For a soft backdrop lighting effect, Perimeos® can accept LED strip lighting and neatly conceals the cabling and drivers.

### Cable Management

For motorised blinds, a cable containment profile keeps the power and control wiring safely out of sight.

### SpeedClip™ Bracket

Blinds and curtain tracks are mounted via the innovative SpeedClip™ bracket which allows products to be installed and removed without any mess or drilling.

### Fascia Profile

For exposed soffit situations, a neat fascia profile clips to the visible face.

### Splice Plates

Steel splice plates can be used inside or outside the box to provide a perfectly flush join. A right angled version is used for corners.

## FINISHES

### White Powdercoated

Standard finish is RAL 9016 White

### Custom Paint

Wet spray to any Dulux or NCS colour reference to match in with your decor.

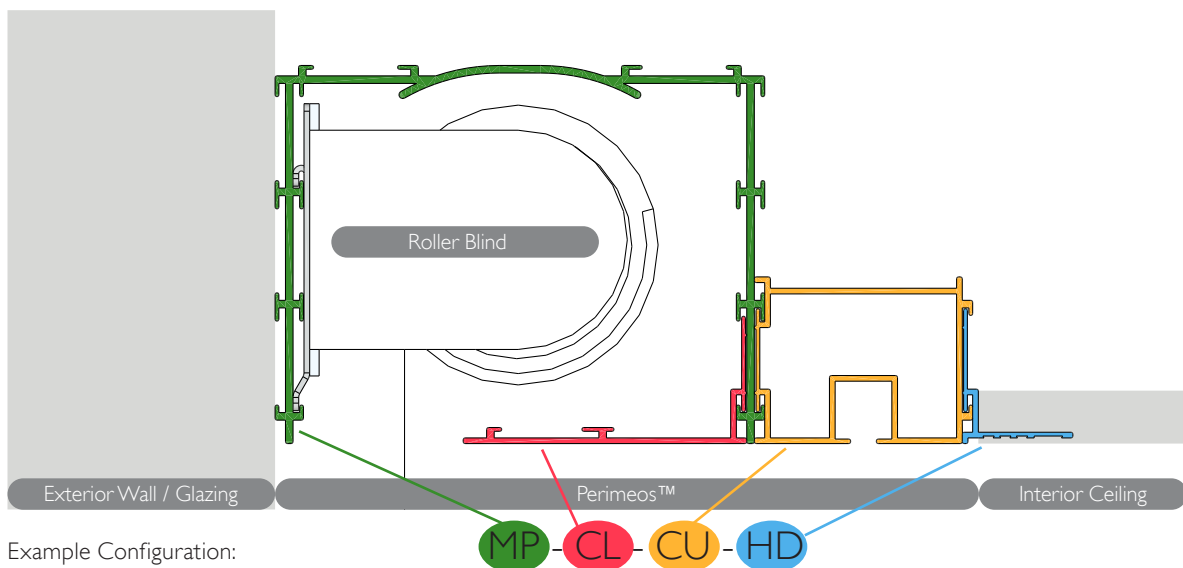

### Custom Metallic

A range of special anodised and metallic powdercoat finishes.
