

# control 600

## Pullwand™

is a wipe-clean, anti-shatter plastic wand for replacing light switch and emergency alarm pull cords in ligature-free areas. Its simple design enables it to be easily fitted to existing switches, providing a cost-effective way of creating a safer patient environment.

### Hygienic

Pull cords for nurse call systems and light switches get soiled through continual use, especially next to patient showers and toilets.

As there is no way of cleaning the ingrained dirt, pull cords present a risk of cross-infection in all clinical areas.

The Pullwand™ has been developed to eliminate these hazards by providing a smooth, impervious surface which can be easily wiped clean with normal disinfectant solutions.

### Safe

The Pullwand™ is designed to replace conventional pull cords in all mental and community health areas where the cords present a ligature hazard.

The ultra-light Pullwand™ is also shatter resistant and flexible to reduce the risk of it being used as a weapon.

### Options

available in three colours:

- high-visibility red for emergency alarm switches
- white for light, fan and shower switches
- bright yellow for extra contrast to help with visual impairment

available in four lengths:

- 1.0 metre
- 1.5 metre
- 2.25 metre (red only)
- 2.85 metre (red only)
