Multi-stop Roller Blind

# SyncroShade®

## Multi-stop Roller Blind

SyncroShade® is a truly innovative roller blind system with a patented mechanism which only allows the blind to stop in specific pre-determined positions. This ensures that your building always has a neat symmetrical appearance with all the blinds horizontally aligned. Designed specially for prestige locations where visual appearance and aesthetics are key.

### Made in the UK

Our UK manufacturing facility ensures total quality control, short lead times, low transport costs and reduced carbon footprint.

### Choose your Style

A choice of fascia profile and hem bar styles, available in a range of finishes allows you to create the look you want.

### Versatile and Flexible

A range of sizes and mounting configurations make SyncroShade® suitable for all kinds of windows large and small.

### Recyclable

The majority of a SyncroShade® blind can be recycled, conserving energy and resources for future generations.

### Environmentally sustainable fabrics

Choose sustainable fabrics from Decor Systems range to pick up environmental credits.

### Compatible with Natural Ventilation systems

The optional guide wire system enables the blind to withstand draughts from open windows.

### 10 Year Warranty

For peace of mind and reduced life cycle costs, SyncroShade® comes with an enhanced 10 year warranty.

### Child Safe

Specify with confidence, knowing that SyncroShade® is compliant with the revised BS EN 13120:2009 + A1:2014 standard.

**One-touch feature**  
Simply release the brake to allow the blind to gently descend to its next preset position.

**Effortless Operation**  
Intelligent counterbalance drive system makes even the largest blinds light and easy to operate.

### SyncroShade® Brake

Patented automatic brake system stops the blinds in a pre-set position so they are all in a neat line.

### High Strength Chain

A special grade stainless steel chain is used for extremely long service life and corrosion resistance.

### Infinity Hem

Minimal and modern ultra low profile fabric wrapped hem.

## FABRIC TYPES

The fabric is the most important part of a blind. SyncroShade® roller blinds are available with a wide range of fabrics to suit your requirements. Some fabrics have anti-microbial treatment, solar reflective coating and recycled content – see our website for the full range. Below are the three main fabric types.

### Blackout

These fabrics are made from opaque material to give zero light transmittance. Suited to applications requiring maximum light exclusion such as conference rooms, bedrooms or south facing facades

### Glare Control

These fabrics are typically close-woven synthetic yarns, which provide total privacy and diffuse the direct sunlight to create a comfortable environment for reading and using computers.

### Screen

These fabrics all have an element of openness in the weave, making them ideal for large areas of glazing where they help attenuate the light without losing visual contact with the outside world. Ideal for open plan offices, atria and circulation spaces.

## OPERATION TYPES

### Default Closed

When the operating chain is released the blind automatically moves down towards the closed position.

### Auto-stop

Configured so that the blind automatically stops at each preset position.

## TOP PROFILES

### None

### Mounting Profile

For fixing to plasterboard substrates, to spread the operating load across the full width of the blind.

### Fascia

A fascia neatly conceals the mechanism and brackets and closes the gap above the blind.

### Perimeos®

Recess profile for concealing a blind within a ceiling with SpeedClip™ brackets for easy no-drill mounting.

## SIDE GUIDES

Choose side guiding for situations with opening windows or sloping glazing up to 15 degrees.

### Without Guides

### Wire Guides

Discreet and cost effective stainless steel cable guides the hem bar.

### Track Guides

Robust aluminium profile guides the hem bar and minimises the gap between the fabric and the window reveal

## HEM BAR STYLES

The hem bar stiffens the bottom edge and provides weight to keep the fabric flat.

### InfinityHem™

Minimalist look with a rigid weight bar concealed within a fabric pocket.

### Round Profile

Stylish tubular aluminium profile for a contemporary look in a natural anodised or powdercoated finish

# Technical

## CONFIGURATION

**Rectangular**

**Multiple linked**

A single chain operates two or more blinds.

**Forward Roll**

Fabric rolls off the back, closest to the glazing.
