EdgeFast™ Blackout System

decor 565

EdgeFast™ Blackout System

The decor 565 EdgeFast™ Blackout System is a proven, dependable solution for total light control. The highlight of the system is the EdgeFast™ side channel. This clever feature locks the fabric securely into the side channels, eliminating fabric pull-out, which is a major source of failure and damage to conventional blackout blinds. Choose from manual chain or crank operation; or go fully automated with standard or silent motor options.

Made in the UK

Our UK manufacturing facility ensures total quality control, short lead times and low transport costs.

Choose your Style

The blind can be either surface mounted using modern square profile or recessed for a minimalist appearance

Versatile and Flexible

A range of sizes and mounting configurations make decor 565 suitable for all kinds of windows large and small.

Recyclable

The majority of a decor 565 blind can be recycled, conserving energy and resources for future generations.

Environmentally sustainable fabrics

Choose sustainable fabrics from Decor Systems range to pick up environmental credits.

Compatible with Natural Ventilation systems

The EdgeFast™ side channels are able to withstand draughts from open windows.

5 Year Warranty

For peace of mind and reduced life cycle costs, decor 565 comes with the Decor Systems standard 5 year warranty.

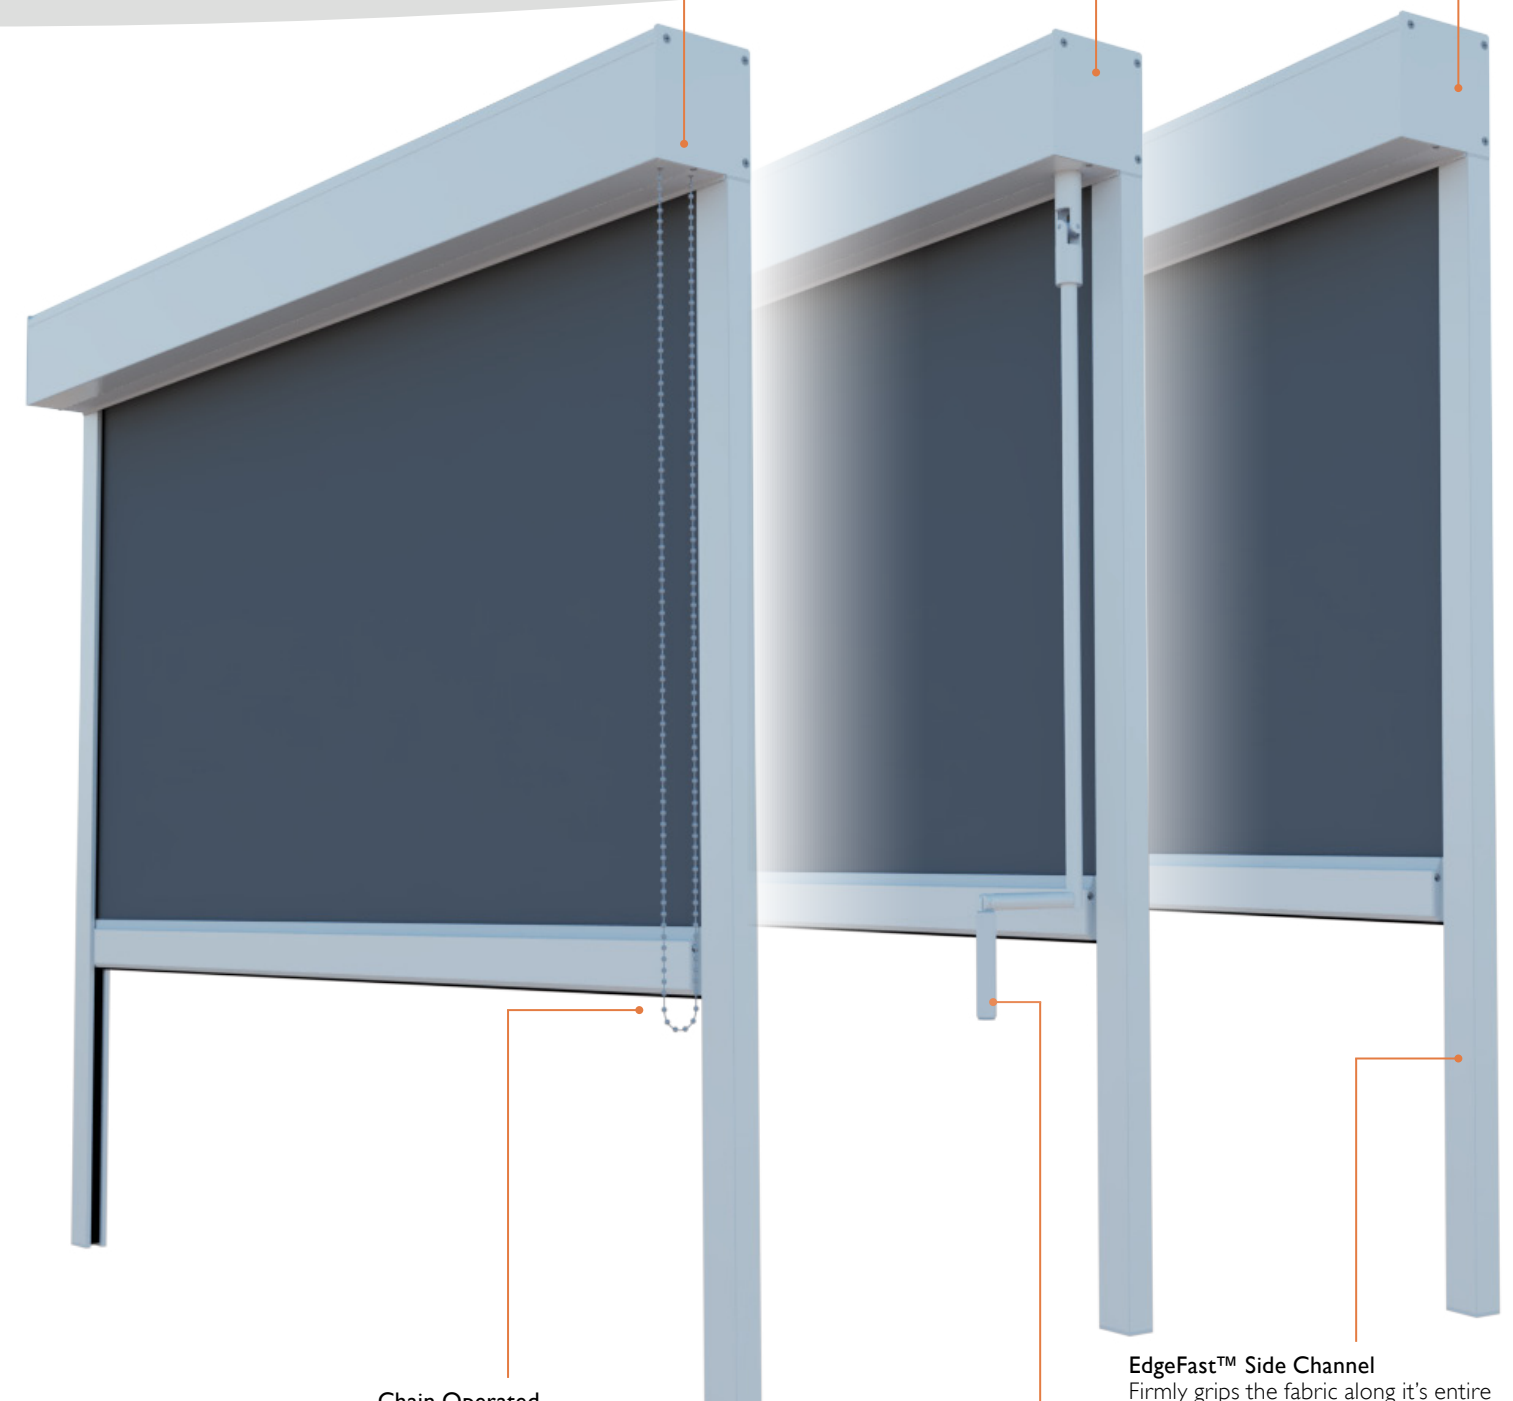

Inherently Child Safe

Specify with confidence, knowing that decor 565 is automatically compliant with the revised BS EN 13120:2009 + A1:2014 standard.

Motorised Operation
Available in radio and wired control formats for effortless opening..

Revoshaft™ Operation
Child Safe cord-free operation with fixed or removable handle

Chain operation
Easy and intuitive manual control

Chain Operated
Standard stainless steel chain.

Magnetic Handle Attachment
The removable Revoshaft™ comes with a clever magnetic fitting which makes it very quick and easy to detach and re-attach.

EdgeFast™ Side Channel
Firmly grips the fabric along its entire length, preventing pull-out.. This also removes the need for stiffening rods and allows wider windows to be covered in a single unit

FABRIC TYPES

The fabric is the most important part of a blind. Although a blackout fabric is generally selected for room darkening purposes, decor 565 blinds are available with a wide range of fabrics, to suit your requirements. The fabric edge retention can be very useful for situations other than blackout. Some fabrics have anti-microbial treatment, solar reflective coating and recycled content – see our website for the full range. Below are the three main fabric types.

Blackout

These fabrics are made from opaque material to give zero light transmittance. Suited to applications requiring maximum light exclusion such as conference rooms, bedrooms or south facing facades

Glare Control

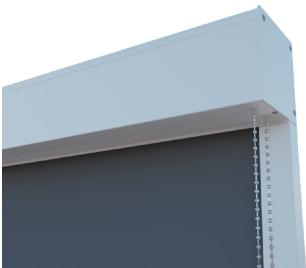

These fabrics are typically close-woven synthetic yarns, which provide total privacy and diffuse the direct sunlight to create a comfortable environment for reading and using computers.

Screen

These fabrics all have an element of openness in the weave, making them ideal for large areas of glazing where they help attenuate the light without losing visual contact with the outside world. Ideal for open plan offices, atria and circulation spaces.

OPERATION TYPES

Chain

Available for smaller unit sizes

Revoshaft

Robust operation for public environments.

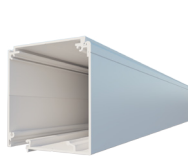

Motorised

Available in wired and radio control formats for effortless opening.

CASSETTE SIZES

Choose between surface mounted or recessed. The cassette size required is determined by the blind height and thickness of the fabric.

Small

surface mounted only

Medium

surface mounted only

Large

surface mounted only

Perimeos

recessed or surface mounted

SIDE CHANNEL OPTIONS

Reveal Fixed

The most common scenario, suits a typical window recess.

Face Fixed

Used where the window recess is too shallow or has obstructions such as window handles.

Recess Fixed

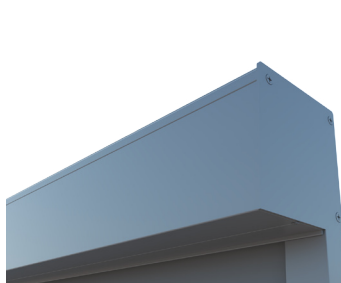

A profile used between adjacent blinds to tie back to the vertical mullion.

HARDWARE FINISHES

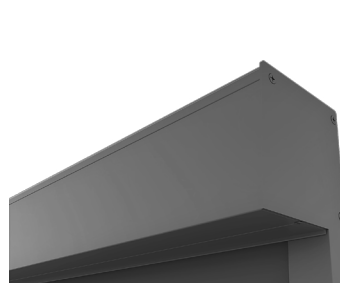

White Powdercoated

Clean and clinical

Custom RAL Powdercoated

Colourful and coordinated

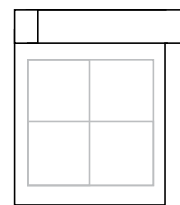

Anodised

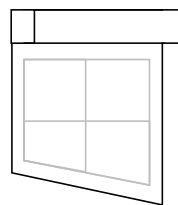

Corporate and Classy

Technical

CONFIGURATION

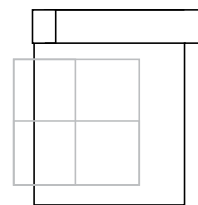

Rectangular

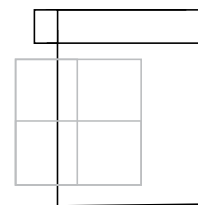

Sloping Cill

The fabric is cut at an angle. Note: the blind cannot be fully retracted

Forward Roll

Fabric rolls off the back, closest to the glazing.

Reverse Roll

Fabric rolls off the front, furthest away from the glazing.
